

PW - Customizing the widget: CSS tags

Customizing the style of the widget payment form is possible by overloading the default style sheet provided by Payline.

The customization functions of the Widget in lightbox mode and in-shop mode (tab / column).

CSS attributes for Widget integration:

```
public static STYLE_ELEMENT_KEYS = ["font-size", "font-family", "font-weight", "font-style", "color", "padding-top",  
    "padding-right", "padding-bottom", "padding-left", "text-transform", "text-decoration", "letter-spacing", "word-spacing",  
    'line-height', 'text-align', 'vertical-align', 'direction', 'background-color',  
    'background-image', 'background-repeat', 'background-position', 'background-attachment', 'opacity', 'margin-top',  
    'margin-left', 'margin-right', 'margin-bottom'];
```

The detail of the class list:
