How to make a payment page ?

There are different ways to integrate Payline checkout into your website. To start you need to create a test account and in few steps you can make a payment.

1. Create a test account

To register a test account, you have to send a request at sales@payline.com with merchant informations.

2. Set up your test account

Configure point of sale and test Terminal Payment Virtual. Integrate Payline API to set up payment steps.

3. Perform test transactions

Depending on integration mode, perform test operations with the payment methods you want to use in production.

4. For production

Sign a contract with Payline to set up your TPV in Payline back office.

We recommend that you define the needs and realize the integration step by step. Pilot production is recommended to check the purchase workflow and validate the payment.

Payment checkout

4 steps are required to complete the order. Once all items are selected by the buyer, the payment checkout takes place until the order validated by the merchant.

1. The merchant site offers a choice of payment methods on its website, app mobile or on a Payline page ;
2. The buyer enters his payment information on payment page. For a best user experience, all steps are in same web page.
At this point, Payline receives the payment request sent by the merchant. Payline checks all informations, do the internal fraud controls and do an authorization request to the acquirer ;
3. In case of using 3D Secure option, a redirection to 3D-Secure page occur before authorization request. This step is optional ;
4. The payment validated, a payment receipt is presented to the shopper by Payline or merchant (optional). The merchant confirm the order.

Checkout overview

Payline offers two ways to integrate [Web Page interface](#) or [Direct Payment interface](#).

The quickest is to integrate through our Web Page with API Payline in Widget mode. You need to set up your server and add a few lines of code to your webpage.

Compare integrations ways :

	Web Page	Direct
Payment Method	all Apple Pay, Amazon Pay, PayPal and more	all Apple Pay, Amazon Pay, PayPal and more
PCI-DSS	SAQ-A	SAQ AEP / SAQ-D
User Interface	Yes	not provided
Supported languages	Easy	Advanced
