

Webservice - disableWalletRequest

Request	Response
---------	--------------------------

The disable Wallet feature allows you to disable a virtual wallet. When a wallet is deactivated, it is no longer possible to do payments from this one.

Request

The disableWalletRequest request must have the following structure :

Element	Description	Required	Format	Example
contractNumber	The VAD contract number that was used to create the wallet.	Yes	AN50	1234567
cardInd	Specifies the index of the card to use in the wallet. This field is required if you use the multiwallet.	No	N2	The index of the card, default value '01'
walletIdList	Wallet ID list.	No	Object walletIdList
