Codes - WalletSecured

The "walletSecured" tag in the "Buyer" object can have the following values :

Value	Description
Empty	No value. Payment without CVV or 3DSecure (no liability shift).
CVV	Payment with CVV request and without 3DSecure (no liability shift).
CVV+3DS	Payment with CVV and 3DSecure request authentication. 3DSecure payment is only possible if the selected contract is 3DSecure. The CVV will be required even if the contract or card is not 3DS. The 3DSecure block below will be present on the payment pages if the contract is 3DSecure:
3DS	Payment with 3DSecure request authentication.

From release 24.2, if the payment method contract is 3D Secure, then an authentication request is systematically performed.
