This object is used as input services.

- If the "paymentData" node is valuated then the other fields of card object should not be filled.
- If the transaction is an Apple Pay transaction and other fields of "card" object are valuated (such as "number") then they are ignored by the process.
- If the "paymentData" node is not valued or badly valued for an ApplePay transaction then the return code to return is 02305 "Invalid field format".

All the fields present in the node are to be valorized as part of an Apple Pay payment.
